Submission STAT1-PS2-SUB03

Question STAT1-PS2-Q01
started with a familiar rule, but the key condition is wrong:
$x\blacksquare=33/5=6.60$
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS2-Q02
started with a familiar rule, but the key condition is wrong:
$P(D\blacksquare\cap D\blacksquare)=(5/13)((5-1)/(13-1))$
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS2-Q03
started with a familiar rule, but the key condition is wrong:
$SE=\sqrt{(p\blacksquare(1-p\blacksquare)/n)}=\sqrt{(0.55(1-0.55)/40)}=0.0787$
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS2-Q04
started with a familiar rule, but the key condition is wrong:
Increase sample size n to reduce standard error.
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS2-Q05
started with a familiar rule, but the key condition is wrong:
$0.03 < 0.05$, so reject $H\blacksquare$ under the stated rule.
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS2-Q06
started with a familiar rule, but the key condition is wrong:
$x\blacksquare=29/5=5.80$
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS2-Q07
started with a familiar rule, but the key condition is wrong:
$P(D\blacksquare\cap D\blacksquare)=(5/19)((5-1)/(19-1))$
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS2-Q08
started with a familiar rule, but the key condition is wrong:
$SE=\sqrt{(p\blacksquare(1-p\blacksquare)/n)}=\sqrt{(0.45(1-0.45)/80)}=0.0556$
I treated variables/constraints as independent, so this conclusion is not justified.
