Submission PY1-PS2-SUB05

Question PY1-PS2-Q01
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get [0, 4, 16], but skipped the required derivation/justification.

Question PY1-PS2-Q02
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get scan counts, then scan in order; return first count==1 else None; O(n) time, O(n) space, but skipped the required derivation/justification.

Question PY1-PS2-Q03
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get repeat passes or track the shrinking unsorted suffix; one pass alone is not a full sort, but skipped the required derivation/justification.

Question PY1-PS2-Q04
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get linear Θ(n), up to 128; binary Θ(log n), about 8, but skipped the required derivation/justification.

Question PY1-PS2-Q05
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get mutation shifts elements and skips checks; use a filtered copy or iterate over a copy, but skipped the required derivation/justification.

Question PY1-PS2-Q06
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get [0, 4, 16, 36], but skipped the required derivation/justification.

Question PY1-PS2-Q07
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get scan counts, then scan in order; return first count==1 else None; O(n) time, O(n) space, but skipped the required derivation/justification.

Question PY1-PS2-Q08
alternate method (not the requested one):
rough work -> [arrow] [arrow]

I get repeat passes or track the shrinking unsorted suffix; one pass alone is not a full sort, but skipped the required derivation/justification.
