Submission CALC1-PS2-SUB03

Question CALC1-PS2-Q01
started with a familiar rule, but the key condition is wrong:
$f'(x)=2x(6x-1)+(x^2+4)6$
I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS2-Q02
started with a familiar rule, but the key condition is wrong:
$\int 2x\,dx = (2/2)x^2$
I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS2-Q03
started with a familiar rule, but the key condition is wrong:
$2w+2l=20 \Rightarrow l=10-w$
I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS2-Q04
started with a familiar rule, but the key condition is wrong:
$x^2-9=(x-3)(x+3)$
I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS2-Q05
started with a familiar rule, but the key condition is wrong:
Critical point: $f'(c)=0$ or $f'(c)$ is undefined (when f is defined).
I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS2-Q06
started with a familiar rule, but the key condition is wrong:
$f'(x)=2x(1x-1)+(x^2+3)1$
I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS2-Q07
started with a familiar rule, but the key condition is wrong:
$\int 4x\,dx = (4/2)x^2$
I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS2-Q08
started with a familiar rule, but the key condition is wrong:
$2w+2l=16 \Rightarrow l=8-w$
I treated variables/constraints as independent, so this conclusion is not justified.
