Submission PHYS1-FINAL-SUB05

Question PHYS1-FINAL-Q01
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get v=18 m/s; displacement=65 m, but skipped the required derivation/justification.

Question PHYS1-FINAL-Q02
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get a=4.54 m/s²; friction opposes motion, but skipped the required derivation/justification.

Question PHYS1-FINAL-Q03
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get v=10.84 m/s, but skipped the required derivation/justification.

Question PHYS1-FINAL-Q04
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get total momentum before equals after when external impulse is negligible, but skipped the required derivation/justification.

Question PHYS1-FINAL-Q05
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get impulse=3 N·s; momentum changes by 3 kg·m/s, but skipped the required derivation/justification.

Question PHYS1-FINAL-Q06
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get v=15 m/s; displacement=50 m, but skipped the required derivation/justification.

Question PHYS1-FINAL-Q07
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get a=1.33 m/s²; friction opposes motion, but skipped the required derivation/justification.

Question PHYS1-FINAL-Q08
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get v=9.90 m/s, but skipped the required derivation/justification.

Question PHYS1-FINAL-Q09

alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get total momentum before equals after when external impulse is negligible, but skipped the required derivation/justification.

Question PHYS1-FINAL-Q10
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get impulse=3 N·s; momentum changes by 3 kg·m/s, but skipped the required derivation/justification.
