Submission LINALG1-FINAL-SUB05

Question LINALG1-FINAL-Q01
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get x=1, y=2, but skipped the required derivation/justification.

Question LINALG1-FINAL-Q02
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get det=8; invertible, but skipped the required derivation/justification.

Question LINALG1-FINAL-Q03
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get T(1,-1)=(-1,4); matrix [[1,2],[3,-1]]; linear, but skipped the required derivation/justification.

Question LINALG1-FINAL-Q04
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get only trivial combination; {(1,0),(0,1)} is linearly independent, but skipped the required derivation/justification.

Question LINALG1-FINAL-Q05
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get the vectors mapped to zero; exactly the solution space of Ax=0, but skipped the required derivation/justification.

Question LINALG1-FINAL-Q06
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get x=1, y=2, but skipped the required derivation/justification.

Question LINALG1-FINAL-Q07
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get det=12; invertible, but skipped the required derivation/justification.

Question LINALG1-FINAL-Q08
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get T(1,-1)=(-1,4); matrix [[1,2],[3,-1]]; linear, but skipped the required derivation/justification.

Question LINALG1-FINAL-Q09
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get only trivial combination; {(1,0),(0,1)} is linearly independent, but skipped the required derivation/justification.

Question LINALG1-FINAL-Q10
alternate method (not the requested one):
rough work -> [arrow] [arrow]
I get the vectors mapped to zero; exactly the solution space of Ax=0, but skipped the required derivation/justification.
