Submission PHYS1-PS2-SUB03

Question PHYS1-PS2-Q01
started with a familiar rule, but the key condition is wrong:
$v=v\blacksquare+at=5+3(4)=17$ m/s
I treated variables/constraints as independent, so this conclusion is not justified.

Question PHYS1-PS2-Q02
started with a familiar rule, but the key condition is wrong:
$N=mg=29.4$ N; friction$=\mu N=5.9$ N
I treated variables/constraints as independent, so this conclusion is not justified.

Question PHYS1-PS2-Q03
started with a familiar rule, but the key condition is wrong:
$mgh=\frac{1}{2}mv^2 \Rightarrow v=\sqrt{(2gh)}=\sqrt{(2\cdot 9.8\cdot 6)}$
I treated variables/constraints as independent, so this conclusion is not justified.

Question PHYS1-PS2-Q04
started with a familiar rule, but the key condition is wrong:
$p_{total,before} = p_{total,after}$
I treated variables/constraints as independent, so this conclusion is not justified.

Question PHYS1-PS2-Q05
started with a familiar rule, but the key condition is wrong:
Impulse is area under $F(t)$: $J=F\Delta t=6(0.5)=3$ N·s.
I treated variables/constraints as independent, so this conclusion is not justified.

Question PHYS1-PS2-Q06
started with a familiar rule, but the key condition is wrong:
$v=v\blacksquare+at=4+2(5)=14$ m/s
I treated variables/constraints as independent, so this conclusion is not justified.

Question PHYS1-PS2-Q07
started with a familiar rule, but the key condition is wrong:
$N=mg=19.6$ N; friction$=\mu N=3.9$ N
I treated variables/constraints as independent, so this conclusion is not justified.

Question PHYS1-PS2-Q08
started with a familiar rule, but the key condition is wrong:
$mgh=\frac{1}{2}mv^2 \Rightarrow v=\sqrt{(2gh)}=\sqrt{(2\cdot 9.8\cdot 6)}$
I treated variables/constraints as independent, so this conclusion is not justified.
