Submission LINALG1-PS2-SUB03

Question LINALG1-PS2-Q01
started with a familiar rule, but the key condition is wrong:
$\det=6(5)-3(1)=27$
I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-PS2-Q02
started with a familiar rule, but the key condition is wrong:
$\det(A)=4\cdot 4-2\cdot 2=12$
I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-PS2-Q03
started with a familiar rule, but the key condition is wrong:
$T(1,-1)=(1-2,3+1)=(-1,4)$
I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-PS2-Q04
started with a familiar rule, but the key condition is wrong:
Set c■(1,0)+c■(0,1)=(0,0).
I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-PS2-Q05
started with a familiar rule, but the key condition is wrong:
Null(A) is the set of vectors sent to the zero vector.
I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-PS2-Q06
started with a familiar rule, but the key condition is wrong:
$\det=6(3)-2(3)=12$
I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-PS2-Q07
started with a familiar rule, but the key condition is wrong:
$\det(A)=6\cdot 2-2\cdot 2=8$
I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-PS2-Q08
started with a familiar rule, but the key condition is wrong:
$T(1,-1)=(1-2,3+1)=(-1,4)$
I treated variables/constraints as independent, so this conclusion is not justified.
