Submission STAT1-PS1-SUB03

Question STAT1-PS1-Q01
started with a familiar rule, but the key condition is wrong:
x■=33/5=6.60
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS1-Q02
started with a familiar rule, but the key condition is wrong:
P(D■∩D■)=(3/16)((3-1)/(16-1))
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS1-Q03
started with a familiar rule, but the key condition is wrong:
SE=√(p■(1–p■)/n)=√(0.35(1–0.35)/40)=0.0754
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS1-Q04
started with a familiar rule, but the key condition is wrong:
Increase sample size n to reduce standard error.
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS1-Q05
started with a familiar rule, but the key condition is wrong:
0.03 < 0.05, so reject H■ under the stated rule.
I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-PS1-Q06
started with a familiar rule, but the key condition is wrong:
x■=21/5=4.20
I treated variables/constraints as independent, so this conclusion is not justified.
