

Submission CALC1-FINAL-SUB03

Question CALC1-FINAL-Q01

started with a familiar rule, but the key condition is wrong:

$$f'(x)=2x(3x-1)+(x^2+2)^3$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-FINAL-Q02

started with a familiar rule, but the key condition is wrong:

$$\int 3x \, dx = (3/2)x^2$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-FINAL-Q03

started with a familiar rule, but the key condition is wrong:

$$2w+2l=20 \Rightarrow l=10-w$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-FINAL-Q04

started with a familiar rule, but the key condition is wrong:

$$x^2-25=(x-5)(x+5)$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-FINAL-Q05

started with a familiar rule, but the key condition is wrong:

Critical point: $f'(c)=0$ or $f'(c)$ is undefined (when f is defined).

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-FINAL-Q06

started with a familiar rule, but the key condition is wrong:

$$f'(x)=2x(3x-1)+(x^2+4)^3$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-FINAL-Q07

started with a familiar rule, but the key condition is wrong:

$$\int 3x \, dx = (3/2)x^2$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-FINAL-Q08

started with a familiar rule, but the key condition is wrong:

$$2w+2l=14 \Rightarrow l=7-w$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-FINAL-Q09

started with a familiar rule, but the key condition is wrong:

$$x^2-25=(x-5)(x+5)$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-FINAL-Q10

started with a familiar rule, but the key condition is wrong:

Critical point: $f'(c)=0$ or $f'(c)$ is undefined (when f is defined).

I treated variables/constraints as independent, so this conclusion is not justified.
