

Submission CALC1-PS1-SUB03

Question CALC1-PS1-Q01

started with a familiar rule, but the key condition is wrong:

$$f'(x)=2x(6x-1)+(x^2+3)6$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS1-Q02

started with a familiar rule, but the key condition is wrong:

$$\int 3x \, dx = (3/2)x^2$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS1-Q03

started with a familiar rule, but the key condition is wrong:

$$2w+2l=22 \Rightarrow l=11-w$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS1-Q04

started with a familiar rule, but the key condition is wrong:

$$x^2-16=(x-4)(x+4)$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS1-Q05

started with a familiar rule, but the key condition is wrong:

Critical point: $f'(c)=0$ or $f'(c)$ is undefined (when f is defined).

I treated variables/constraints as independent, so this conclusion is not justified.

Question CALC1-PS1-Q06

started with a familiar rule, but the key condition is wrong:

$$f'(x)=2x(4x-1)+(x^2+4)4$$

I treated variables/constraints as independent, so this conclusion is not justified.
