

## Submission CALC1-QUIZ-SUB03

### Question CALC1-QUIZ-Q01

started with a familiar rule, but the key condition is wrong:

$$f'(x)=2x(2x-1)+(x^2+5)^2$$

I treated variables/constraints as independent, so this conclusion is not justified.

### Question CALC1-QUIZ-Q02

started with a familiar rule, but the key condition is wrong:

$$\int 5x \, dx = (5/2)x^2$$

I treated variables/constraints as independent, so this conclusion is not justified.

### Question CALC1-QUIZ-Q03

started with a familiar rule, but the key condition is wrong:

$$2w+2l=20 \Rightarrow l=10-w$$

I treated variables/constraints as independent, so this conclusion is not justified.

### Question CALC1-QUIZ-Q04

started with a familiar rule, but the key condition is wrong:

$$x^2-36=(x-6)(x+6)$$

I treated variables/constraints as independent, so this conclusion is not justified.

### Question CALC1-QUIZ-Q05

started with a familiar rule, but the key condition is wrong:

Critical point:  $f'(c)=0$  or  $f'(c)$  is undefined (when  $f$  is defined).

I treated variables/constraints as independent, so this conclusion is not justified.
