

Submission LINALG1-MID-SUB01

Question LINALG1-MID-Q01

scratch: show step

1. $\det=2(3)-4(2)=-2$
 2. Eliminate y , yielding $x=1$; substitute $\Rightarrow y=2$
 3. checks: $2(1)+4(2)=10$, $2(1)+3(2)=8$
- $\Rightarrow$ FINAL: $x=1$, $y=2$ (check units/interpretation)

Question LINALG1-MID-Q02

scratch: show step

1. $\det(A)=6\cdot 4-2\cdot 2=20$
 2. $\det(A) \neq 0$, so A is invertible.
- $\Rightarrow$ FINAL: $\det=20$; invertible (check units/interpretation)

Question LINALG1-MID-Q03

scratch: show step

1. $T(1,-1)=(1-2,3+1)=(-1,4)$
 2. Matrix $\begin{bmatrix} 1 & 2 \\ 3 & -1 \end{bmatrix}$
 3. Both coordinate rules have no constant term, so T is linear.
- $\Rightarrow$ FINAL: $T(1,-1)=(-1,4)$; matrix $\begin{bmatrix} 1 & 2 \\ 3 & -1 \end{bmatrix}$; linear (check units/interpretation)

Question LINALG1-MID-Q04

scratch: show step

1. Set $c\blacksquare(1,0)+c\blacksquare(0,1)=(0,0)$.
 2. Coordinates give $c\blacksquare=0$ and $c\blacksquare=0$ only, so the set is independent.
- $\Rightarrow$ FINAL: only trivial combination; $\{(1,0),(0,1)\}$ is linearly independent (check units/interpretation)

Question LINALG1-MID-Q05

scratch: show step

1. $\text{Null}(A)$ is the set of vectors sent to the zero vector.
 2. It is the solution space of $Ax=0$ and is a subspace.
- $\Rightarrow$ FINAL: the vectors mapped to zero; exactly the solution space of $Ax=0$ (check units/interpretation)

Question LINALG1-MID-Q06

scratch: show step

1. $\det=5(5)-2(2)=21$
 2. Eliminate y , yielding $x=1$; substitute $\Rightarrow y=2$
 3. checks: $5(1)+2(2)=9$, $2(1)+5(2)=12$
- $\Rightarrow$ FINAL: $x=1$, $y=2$ (check units/interpretation)

Question LINALG1-MID-Q07

scratch: show step

1. $\det(A)=2\cdot 2-2\cdot 2=0$

2. $\det(A) = 0$, so A is not invertible.

=> FINAL: $\det=0$; not invertible (check units/interpretation)

Question LINALG1-MID-Q08

scratch: show step

1. $T(1, -1) = (1 - 2, 3 + 1) = (-1, 4)$

2. Matrix $[[1, 2], [3, -1]]$

3. Both coordinate rules have no constant term, so T is linear.

=> FINAL: $T(1, -1) = (-1, 4)$; matrix $[[1, 2], [3, -1]]$; linear (check units/interpretation)
