

Submission LINALG1-MID-SUB03

Question LINALG1-MID-Q01

started with a familiar rule, but the key condition is wrong:

$$\det = 2(3) - 4(2) = -2$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-MID-Q02

started with a familiar rule, but the key condition is wrong:

$$\det(A) = 6 \cdot 4 - 2 \cdot 2 = 20$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-MID-Q03

started with a familiar rule, but the key condition is wrong:

$$T(1, -1) = (1 - 2, 3 + 1) = (-1, 4)$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-MID-Q04

started with a familiar rule, but the key condition is wrong:

$$\text{Set } c \blacksquare(1, 0) + c \blacksquare(0, 1) = (0, 0).$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-MID-Q05

started with a familiar rule, but the key condition is wrong:

$\text{Null}(A)$ is the set of vectors sent to the zero vector.

I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-MID-Q06

started with a familiar rule, but the key condition is wrong:

$$\det = 5(5) - 2(2) = 21$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-MID-Q07

started with a familiar rule, but the key condition is wrong:

$$\det(A) = 2 \cdot 2 - 2 \cdot 2 = 0$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question LINALG1-MID-Q08

started with a familiar rule, but the key condition is wrong:

$$T(1, -1) = (1 - 2, 3 + 1) = (-1, 4)$$

I treated variables/constraints as independent, so this conclusion is not justified.
