

## Submission MICRO1-FINAL-SUB02

### Question MICRO1-FINAL-Q01

work / setup:

1.  $44 - 4P = 7 + P \Rightarrow P^* = (44 - 7) / (4 + 1) = 7.40$

2.  $Q^* = 44 - 4(7.40) = 14.40$

crossed-out arithmetic: [smudged]

FINAL (maybe):  $P^* = 7.40$ ,  $Q^* = 14.40$  plus 1

### Question MICRO1-FINAL-Q02

work / setup:

1.  $\% \Delta Q = -4 / 38.0$

2.  $\% \Delta P = 0.0952$

crossed-out arithmetic: [smudged]

FINAL (maybe): elasticity = -1.11; elastic plus 1

### Question MICRO1-FINAL-Q03

work / setup:

1. Shift the wedge between buyer and seller prices by t.

2. Quantity falls relative to equilibrium.

crossed-out arithmetic: [smudged]

FINAL (maybe): buyer price minus seller price equals tax; quantity falls; deadweight loss increases plus 1

### Question MICRO1-FINAL-Q04

work / setup:

1.  $SMC = PMC + \text{marginal external cost}$ , so SMC lies above PMC.

crossed-out arithmetic: [smudged]

FINAL (maybe): social MC above private MC; Pigouvian tax can internalize the external cost plus 1

### Question MICRO1-FINAL-Q05

work / setup:

1. At the ceiling,  $Q_d$  exceeds  $Q_s$ .

crossed-out arithmetic: [smudged]

FINAL (maybe):  $Q_d > Q_s$  creates a shortage; queues/rationing may allocate units plus 1

### Question MICRO1-FINAL-Q06

work / setup:

1.  $31 - 5P = 8 + P \Rightarrow P^* = (31 - 8) / (5 + 1) = 3.83$

2.  $Q^* = 31 - 5(3.83) = 11.83$

crossed-out arithmetic: [smudged]

FINAL (maybe):  $P^* = 3.83$ ,  $Q^* = 11.83$  plus 1

### Question MICRO1-FINAL-Q07

work / setup:

1.  $\% \Delta Q = -2/19.0$

2.  $\% \Delta P = 0.0952$

crossed-out arithmetic: [smudged]

FINAL (maybe): elasticity = -1.11; elastic plus 1

Question MICRO1-FINAL-Q08

work / setup:

1. Shift the wedge between buyer and seller prices by  $t$ .

2. Quantity falls relative to equilibrium.

crossed-out arithmetic: [smudged]

FINAL (maybe): buyer price minus seller price equals tax; quantity falls; deadweight loss increases plus 1

Question MICRO1-FINAL-Q09

work / setup:

1.  $SMC = PMC + \text{marginal external cost}$ , so SMC lies above PMC.

crossed-out arithmetic: [smudged]

FINAL (maybe): social MC above private MC; Pigouvian tax can internalize the external cost plus 1

Question MICRO1-FINAL-Q10

work / setup:

1. At the ceiling,  $Q_d$  exceeds  $Q_s$ .

crossed-out arithmetic: [smudged]

FINAL (maybe):  $Q_d > Q_s$  creates a shortage; queues/rationing may allocate units plus 1
