

Submission MICRO1-FINAL-SUB08

Question MICRO1-FINAL-Q01

scan faint / margin cut off

visible work:

$$44 - 4P = 7 + P \Rightarrow P^* = (44 - 7) / (4 + 1) = 7.40 \dots ?$$

last line is hard to read; maybe $P^* = 7.40$, $Q^* = 14.40$

Question MICRO1-FINAL-Q02

scan faint / margin cut off

visible work:

$$\% \Delta Q = -4 / 38.0 \dots ?$$

last line is hard to read; maybe elasticity = -1.11; elastic

Question MICRO1-FINAL-Q03

scan faint / margin cut off

visible work:

Shift the wedge between buyer and seller prices by $t \dots ?$

last line is hard to read; maybe buyer price minus seller price equals tax; quantity falls; deadweight loss increases

Question MICRO1-FINAL-Q04

scan faint / margin cut off

visible work:

$SMC = PMC + \text{marginal external cost}$, so SMC lies above PMC.... ?

last line is hard to read; maybe social MC above private MC; Pigouvian tax can internalize the external cost

Question MICRO1-FINAL-Q05

scan faint / margin cut off

visible work:

At the ceiling, Q_d exceeds $Q_s \dots ?$

last line is hard to read; maybe $Q_d > Q_s$ creates a shortage; queues/rationing may allocate units

Question MICRO1-FINAL-Q06

scan faint / margin cut off

visible work:

$$31 - 5P = 8 + P \Rightarrow P^* = (31 - 8) / (5 + 1) = 3.83 \dots ?$$

last line is hard to read; maybe $P^* = 3.83$, $Q^* = 11.83$

Question MICRO1-FINAL-Q07

scan faint / margin cut off

visible work:

$$\% \Delta Q = -2 / 19.0 \dots ?$$

last line is hard to read; maybe elasticity = -1.11; elastic

Question MICRO1-FINAL-Q08

scan faint / margin cut off

visible work:

Shift the wedge between buyer and seller prices by t.... ?

last line is hard to read; maybe buyer price minus seller price equals tax; quantity falls; deadweight loss increases

Question MICRO1-FINAL-Q09

scan faint / margin cut off

visible work:

$SMC = PMC + \text{marginal external cost}$, so SMC lies above PMC.... ?

last line is hard to read; maybe social MC above private MC; Pigouvian tax can internalize the external cost

Question MICRO1-FINAL-Q10

scan faint / margin cut off

visible work:

At the ceiling, Q_d exceeds Q_s ?

last line is hard to read; maybe $Q_d > Q_s$ creates a shortage; queues/rationing may allocate units
