

Submission MICRO1-MID-SUB03

Question MICRO1-MID-Q01

started with a familiar rule, but the key condition is wrong:

$$55 - 3P = 3 + P \Rightarrow P^* = (55 - 3) / (3 + 1) = 13.00$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question MICRO1-MID-Q02

started with a familiar rule, but the key condition is wrong:

$$\% \Delta Q = -6 / 57.0$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question MICRO1-MID-Q03

started with a familiar rule, but the key condition is wrong:

Shift the wedge between buyer and seller prices by t .

I treated variables/constraints as independent, so this conclusion is not justified.

Question MICRO1-MID-Q04

started with a familiar rule, but the key condition is wrong:

$SMC = PMC + \text{marginal external cost}$, so SMC lies above PMC .

I treated variables/constraints as independent, so this conclusion is not justified.

Question MICRO1-MID-Q05

started with a familiar rule, but the key condition is wrong:

At the ceiling, Q_d exceeds Q_s .

I treated variables/constraints as independent, so this conclusion is not justified.

Question MICRO1-MID-Q06

started with a familiar rule, but the key condition is wrong:

$$44 - 4P = 4 + P \Rightarrow P^* = (44 - 4) / (4 + 1) = 8.00$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question MICRO1-MID-Q07

started with a familiar rule, but the key condition is wrong:

$$\% \Delta Q = -5 / 47.5$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question MICRO1-MID-Q08

started with a familiar rule, but the key condition is wrong:

Shift the wedge between buyer and seller prices by t .

I treated variables/constraints as independent, so this conclusion is not justified.
