

Submission PHYS1-MID-SUB05

Question PHYS1-MID-Q01

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $v=19$ m/s; displacement= 57.5 m, but skipped the required derivation/justification.

Question PHYS1-MID-Q02

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $a=0.87$ m/s²; friction opposes motion, but skipped the required derivation/justification.

Question PHYS1-MID-Q03

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $v=12.52$ m/s, but skipped the required derivation/justification.

Question PHYS1-MID-Q04

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get total momentum before equals after when external impulse is negligible, but skipped the required derivation/justification.

Question PHYS1-MID-Q05

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get impulse= 3 N·s; momentum changes by 3 kg·m/s, but skipped the required derivation/justification.

Question PHYS1-MID-Q06

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $v=13$ m/s; displacement= 20 m, but skipped the required derivation/justification.

Question PHYS1-MID-Q07

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $a=6.04$ m/s²; friction opposes motion, but skipped the required derivation/justification.

Question PHYS1-MID-Q08

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $v=13.28$ m/s, but skipped the required derivation/justification.
