

Submission PHYS1-PS2-SUB05

Question PHYS1-PS2-Q01

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $v=17 \text{ m/s}$; displacement= 44 m , but skipped the required derivation/justification.

Question PHYS1-PS2-Q02

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $a=4.37 \text{ m/s}^2$; friction opposes motion, but skipped the required derivation/justification.

Question PHYS1-PS2-Q03

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $v=10.84 \text{ m/s}$, but skipped the required derivation/justification.

Question PHYS1-PS2-Q04

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get total momentum before equals after when external impulse is negligible, but skipped the required derivation/justification.

Question PHYS1-PS2-Q05

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get impulse= $3 \text{ N}\cdot\text{s}$; momentum changes by $3 \text{ kg}\cdot\text{m/s}$, but skipped the required derivation/justification.

Question PHYS1-PS2-Q06

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $v=14 \text{ m/s}$; displacement= 45 m , but skipped the required derivation/justification.

Question PHYS1-PS2-Q07

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $a=3.54 \text{ m/s}^2$; friction opposes motion, but skipped the required derivation/justification.

Question PHYS1-PS2-Q08

alternate method (not the requested one):

rough work -> [arrow] [arrow]

I get $v=10.84 \text{ m/s}$, but skipped the required derivation/justification.
