

Submission PY1-FINAL-SUB08

Question PY1-FINAL-Q01

scan faint / margin cut off

visible work:

range(6) gives 0 through 5... ?

last line is hard to read; maybe [0, 4, 16]

Question PY1-FINAL-Q02

scan faint / margin cut off

visible work:

counts = Counter(xs)... ?

last line is hard to read; maybe scan counts, then scan in order; return first count==1 else None; $O(n)$ time, $O(n)$ space

Question PY1-FINAL-Q03

scan faint / margin cut off

visible work:

A single pass fixes only adjacent inversions encountered once.... ?

last line is hard to read; maybe repeat passes or track the shrinking unsorted suffix; one pass alone is not a full sort

Question PY1-FINAL-Q04

scan faint / margin cut off

visible work:

linear scan: up to 64 comparisons, $\Theta(n)$... ?

last line is hard to read; maybe linear $\Theta(n)$, up to 64; binary $\Theta(\log n)$, about 7

Question PY1-FINAL-Q05

scan faint / margin cut off

visible work:

Removing shifts later elements left while the iterator advances.... ?

last line is hard to read; maybe mutation shifts elements and skips checks; use a filtered copy or iterate over a copy

Question PY1-FINAL-Q06

scan faint / margin cut off

visible work:

range(5) gives 0 through 4... ?

last line is hard to read; maybe [0, 4, 16]

Question PY1-FINAL-Q07

scan faint / margin cut off

visible work:

counts = Counter(xs)... ?

last line is hard to read; maybe scan counts, then scan in order; return first count==1 else None; $O(n)$ time, $O(n)$ space

Question PY1-FINAL-Q08

scan faint / margin cut off

visible work:

A single pass fixes only adjacent inversions encountered once.... ?

last line is hard to read; maybe repeat passes or track the shrinking unsorted suffix; one pass alone is not a full sort

Question PY1-FINAL-Q09

scan faint / margin cut off

visible work:

linear scan: up to 64 comparisons, $\Theta(n)$... ?

last line is hard to read; maybe linear $\Theta(n)$, up to 64; binary $\Theta(\log n)$, about 7

Question PY1-FINAL-Q10

scan faint / margin cut off

visible work:

Removing shifts later elements left while the iterator advances.... ?

last line is hard to read; maybe mutation shifts elements and skips checks; use a filtered copy or iterate over a copy
