

## Submission PY1-PS1-SUB08

### Question PY1-PS1-Q01

scan faint / margin cut off

visible work:

range(5) gives 0 through 4... ?

last line is hard to read; maybe [0, 4, 16]

### Question PY1-PS1-Q02

scan faint / margin cut off

visible work:

counts = Counter(xs)... ?

last line is hard to read; maybe scan counts, then scan in order; return first count==1 else None;  $O(n)$  time,  $O(n)$  space

### Question PY1-PS1-Q03

scan faint / margin cut off

visible work:

A single pass fixes only adjacent inversions encountered once.... ?

last line is hard to read; maybe repeat passes or track the shrinking unsorted suffix; one pass alone is not a full sort

### Question PY1-PS1-Q04

scan faint / margin cut off

visible work:

linear scan: up to 64 comparisons,  $\Theta(n)$ ... ?

last line is hard to read; maybe linear  $\Theta(n)$ , up to 64; binary  $\Theta(\log n)$ , about 7

### Question PY1-PS1-Q05

scan faint / margin cut off

visible work:

Removing shifts later elements left while the iterator advances.... ?

last line is hard to read; maybe mutation shifts elements and skips checks; use a filtered copy or iterate over a copy

### Question PY1-PS1-Q06

scan faint / margin cut off

visible work:

range(5) gives 0 through 4... ?

last line is hard to read; maybe [0, 4, 16]
