

Submission STAT1-QUIZ-SUB03

Question STAT1-QUIZ-Q01

started with a familiar rule, but the key condition is wrong:

$$\bar{x} = 39/5 = 7.80$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-QUIZ-Q02

started with a familiar rule, but the key condition is wrong:

$$P(D_1 \cap D_2) = (2/14)((2-1)/(14-1))$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-QUIZ-Q03

started with a familiar rule, but the key condition is wrong:

$$SE = \sqrt{(\hat{p}(1-\hat{p}))/n} = \sqrt{(0.35(1-0.35)/40)} = 0.0754$$

I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-QUIZ-Q04

started with a familiar rule, but the key condition is wrong:

Increase sample size n to reduce standard error.

I treated variables/constraints as independent, so this conclusion is not justified.

Question STAT1-QUIZ-Q05

started with a familiar rule, but the key condition is wrong:

$0.03 < 0.05$, so reject H_0 under the stated rule.

I treated variables/constraints as independent, so this conclusion is not justified.
